

Side and Sill Channels

This "U" shaped aluminum extrusion is used to minimize light gaps at right, left and bottom edges of the roller shade. Light blocking brush is included with these channels to help minimize light seepage. These channels are typically used for applications where complete blackout of light is desired.

1.5" x .875" – Typically used for manual or low voltage motorized shades except 504 DC

2.5" x .9" – Typically used for AC motorized shades and 504 DC

2.5" x .9" – Used for Sill channel

Channels are available in Anodized, White, Ivory, Bronze and Black.
